Media Release

Shell Refining sign 4 year contract with ATMECO for leak risk management services

24 August 2010

Shell Refining have entered into a 4 year agreement for ATMECO to provide leak risk management services at the Shell Clyde Refinery and Gore Bay Terminal in Sydney, NSW.

The contract involves implementation of the ATMECO Component Integrity Management System (CIMS) to detect and assist remediate hydrocarbon leaks within these Shell facilities.

CIMS is a web-based software system used to capture leak risk management data and to provide a wide variety of reports for client operations and maintenance personnel to help them monitor and report on facility leak risk status and management.

CIMS provides ATMECO clients with 'bank-level' security online access 24/7 to their data.

Once fully implemented Shell Refining will have significantly reduced fugitive emissions of hydrocarbons from these facilities, reduced facility risk associated with hydrocarbon leaks, improved employee health and safety, reduced product losses, and improved efficiency.

ATMECO Operations Manager, Antoine Hanekom, commented *"after a successful Pilot Program conducted by ATMECO at the Clyde Refinery we are pleased that Shell has selected ATMECO to progress to a full implementation of CIMS at both locations."*
